

ABSTRACT

A data output method includes a selection instruction reception step for receiving a button selection instruction for selecting one of two or more buttons realizing the same function and having different attribute values, which
5 buttons are displayed on an input screen, a selection instruction information recording step of recording selection instruction information which is information on a button selection instruction according to the selection instruction received in the selection instruction reception step, and a data
10 output step of changing data to be output according to the selection instruction information recorded in the selection instruction information recording step and outputting the data. Thus it is possible to output data appropriate for a user without inputting the user individual attribute.
